$$X \rightarrow A^2$$
 trabajordes empresa

 $X \rightarrow A^2$ trabajordes empresa

$$f_{xy} = \frac{S_{xy}}{S_{x}.S_{y}} \quad \Rightarrow S_{y} = \frac{S_{xy}}{N} - x \cdot y \quad \begin{cases} x = \frac{S_{xy}}{N} = 14 \\ y = \frac{S_{y}}{N} = 10 \end{cases}$$

$$S_{xy} = \frac{21675}{150} - 14 \cdot 10 = 415$$

$$S_{xy}^{2} = \frac{Z_{x}i^{2}}{15} - (x)^{2} = 4 \Rightarrow S_{x} = \sqrt{4}$$

$$S_{xy}^{2} = \frac{Z_{x}i^{2}}{N} - (y)^{2} = 6125 \Rightarrow y = \sqrt{6125}$$

$$F_{xy} = \frac{415}{\sqrt{4} \cdot \sqrt{6125}} = 0.9$$

- Calcular recta
$$y = ux + u$$

$$\begin{cases} u = \frac{5uy}{5^{\frac{2}{3}}} & u = \frac{4.5}{4} = 918 \\ u = -\frac{5uy}{5^{\frac{2}{3}}} & x + y = \frac{4.5}{4} = 918 \end{cases}$$
(recta A $y = 918x - \frac{23}{4}$)
$$y = 918x - \frac{23}{4}$$

— En la recha calculada en el apartido 8); sublitoismos (a e por 18
$$y = 9y-13-\frac{23}{4} \Rightarrow y = 8875$$
